**ABSTRACT**: **CampusIQ** is an AI-powered university support platform that helps students access academic and administrative information through natural-language interaction. The system uses **RAG, NLP, LLMs, and semantic search** to retrieve information from university documents such as regulations, examination notifications, attendance policies, placement guidelines, and circulars. It further combines institutional information with student-specific data to provide **personalized guidance, eligibility analysis, recommendations, and timely notifications**. Built using **MERN with TypeScript and FastAPI**, the platform aims to reduce manual document searching, improve information accessibility, and provide efficient and intelligent support to students and administrators.

Keywords: CampusIQ, Artificial Intelligence, RAG, Natural Language Processing, Large Language Models, Semantic Search, University Support System, Personalized Student Support, Eligibility Analysis, MERN, TypeScript, FastAPI
